According to our (Global Info Research) latest study, the global Electrostrictive Material market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Electrostrictive materials are similar to piezoelectric materials because they are ferroelectric crystals, which exhibit a dimensional change upon an applied electric field or an electric polarization in an applied mechanical stress.

However, electrostrictive actuators use a lead-magnesium-niobate (PMN) crystal stack while piezoelectric actuators use lead-zirconate-titanate (PZT)-based ceramics. Electrostrictive transducers are used in a number of applications that include adaptive optic systems, scanning tunneling microscopes, and precision micropositioners.

The Global Info Research report includes an overview of the development of the Electrostrictive Material industry chain, the market status of Actuator (Lead Magnesium Niobate-Lead Titanate, Polymers), Transducer (Lead Magnesium Niobate-Lead Titanate, Polymers), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Electrostrictive Material.
