According to our (Global Info Research) latest study, the global Endoscopic Puncture Needle market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The global market for endoscopic puncture needles is expected to grow significantly in the coming years due to an increasing number of minimally invasive surgeries, rising prevalence of gastrointestinal and urological disorders, and increasing healthcare expenditure. The market is also being driven by technological advancements in endoscopy and the growing preference for outpatient surgeries. However, the high cost of endoscopy procedures and stringent regulatory requirements for device approval may hinder the market growth to some extent.

The endoscopic puncture needle is a medical instrument used in endoscopy procedures. It is a long, thin, surgical needle used to puncture tissues or organs inside the body during an endoscopic procedure. It is designed to be used with an endoscope, a medical device with a camera and light attached to a thin flexible tube, to access and visualize internal organs or other structures. The endoscopic puncture needle can be used for diagnostic or therapeutic purposes, including taking biopsies or draining fluid from cysts or abscesses.
