Abstracts

The global Endoscopic Puncture Needle market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The global market for endoscopic puncture needles is expected to grow significantly in the coming years due to an increasing number of minimally invasive surgeries, rising prevalence of gastrointestinal and urological disorders, and increasing healthcare expenditure. The market is also being driven by technological advancements in endoscopy and the growing preference for outpatient surgeries. However, the high cost of endoscopy procedures and stringent regulatory requirements for device approval may hinder the market growth to some extent.

The endoscopic puncture needle is a medical instrument used in endoscopy procedures. It is a long, thin, surgical needle used to puncture tissues or organs inside the body during an endoscopic procedure. It is designed to be used with an endoscope, a medical device with a camera and light attached to a thin flexible tube, to access and visualize internal organs or other structures. The endoscopic puncture needle can be used for diagnostic or therapeutic purposes, including taking biopsies or draining fluid from cysts or abscesses.
