Abstracts

According to our (Global Info Research) latest study, the global Endoscopic Stone Extraction Basket market size was valued at US\$ 422 million in 2025 and is forecast to a readjusted size of US\$ 549 million by 2032 with a CAGR of 3.6% during review period.

In 2025, global Endoscopic Stone Extraction Basket production reached approximately 6,300 k units with an average global market price of around US\$ 65 per unit, and a gross profit margin of approximately 10%-30%. Endoscopic Stone Extraction Baskets are minimally invasive retrieval devices used in urology and gastroenterology to capture and remove stones or foreign bodies through an endoscope. They typically consist of a flexible catheter and a deployable wire basket made from nitinol or stainless steel, controlled by a handle that opens, closes, and repositions the basket under endoscopic or fluoroscopic guidance. Designs vary by basket shape, wire count, tip configuration, and torque response to optimize stone engagement and reduce mucosal trauma. They are used in ureteroscopy for kidney/ureter stones and in ERCP procedures for bile duct stone extraction, often alongside lithotripsy. Key requirements include reliable deployment, strong capture, kink resistance, radiopacity, and smooth retrieval to minimize injury.

The industrial chain of Endoscopic Stone Extraction Baskets includes upstream materials such as nitinol/stainless wires, PTFE or polymer sheaths, radiopaque markers, adhesives, handle plastics, and sterile packaging. Midstream manufacturing covers wire forming and heat setting, catheter extrusion, assembly, bonding, torque and deployment testing, cleaning, and sterilization validation. Downstream users include hospitals, endoscopy centers, urology departments, and GI units, with distribution

through medical device supply channels. Services include clinical training, regulatory documentation, and post-market surveillance.
