The global Endoscopic Submucosal Dissection (ESD) Knives market size is expected to reach \$ 808.5 million by 2029, rising at a market growth of 8.0% CAGR during the forecast period (2023-2029).

Global key players of endoscopic submucosal dissection (ESD) knives include Olympus, Boston Scientific, Erbe Elektromedizin, etc. The top three players hold a share about 57%. Asia-Pacific is the largest market, has a share about 38%, followed by North America and Europe, with share 27% and 25%, separately.

Endoscopic submucosal dissection (ESD) is a minimally invasive procedure that removes cancer from the gastrointestinal tract of a patient without removing the organ involved. This allows the patient to maintain quality of life. In classic endoscopic resection prior to the introduction of ESD, an electric knife was used primarily to pre-cut the area around the lesion before using a snare for gastrointestinal lesions. During ESD, an endoscopic electric knife is an important accessory device for dissecting the submucosal layer of the lesion and the surrounding region.
