According to our (Global Info Research) latest study, the global Endoscopy Needle Holder market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The future market outlook for endoscopy needle holders is positive, as the demand for minimally invasive procedures continues to grow and new technological advancements are being made. The increasing prevalence of chronic diseases such as cancer and gastrointestinal disorders, coupled with the growing demand for early diagnosis and treatment, is driving the growth of the endoscopy devices market. Endoscopy needle holders are essential instruments in endoscopic procedures and their usage is expected to increase along with the growth of the endoscopy devices market. Additionally, advancements in technology such as the development of robotic-assisted endoscopy and wireless endoscopy systems are also expected to drive the growth of the endoscopy devices market, and as a result, the demand for endoscopy needle holders is expected to increase further. Furthermore, the shift towards single-use, disposable instruments is also expected to fuel the growth of the endoscopy needle holder market. Overall, the future market outlook for endoscopy needle holders is positive, and the market is expected to grow over the coming years.

The endoscopy needle holder is a surgical instrument used in endoscopic procedures to hold and manipulate needles. It is specifically designed for use in minimally invasive surgeries, where small incisions are made and thin tubes (endoscopes) with attached cameras and instruments are inserted to access and visualize internal organs and tissues.

Endoscopic needle holders typically have long, thin jaws with a serrated edge that can securely hold needles of various sizes. They are also designed with a locking mechanism to prevent the needle from slipping or falling out during the procedure. The long, narrow design allows access to the surgical site through small incisions and enables precise manipulation of the needle during procedures such as biopsy, tissue sampling, or stenting.

Endoscopic needle holders may be reusable or disposable, and are made from high-quality materials like surgical-grade stainless steel or titanium alloy to ensure durability and sterility. They play a vital role in minimally invasive surgery and have greatly improved the accuracy and safety of endoscopic procedures.
