According to our (Global Info Research) latest study, the global Endoscopy Systems market size was valued at USD 7353.2 million in 2023 and is forecast to a readjusted size of USD 10130 million by 2030 with a CAGR of 4.7% during review period.

An endoscopy (looking inside) is used in medicine to look inside the body. The endoscopy procedure uses an endoscope to examine the interior of a hollow organ or cavity of the body. Unlike many other medical imaging techniques, endoscopes are inserted directly into the organ.

Endoscopes are expected to account for the largest share of the market in 2017 and this segment is also estimated to grow at the highest CAGR during the forecast period. The dominant market share and growth rate of this segment can be primarily attributed to the rising adoption of minimally invasive procedures, increasing technological advancements, and disposable endoscopes and the subsequent need to repeat the purchase of these single-use products.
