## Abstracts

According to our (Global Info Research) latest study, the global Endothelial Dysfunction market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Endothelium is an inert lining of the blood vessels which act as highly specialized and metabolically active interface between the blood and the underlying tissues. The basic activities of endothelium encompass mediation of coagulation, platelet adhesion, immune function and control of volume and electrolyte content of the intravascular and extravascular spaces. Endothelium dysfunction can be defined as partial or complete loss of balance between vasodilating and vasoconstricting substances produced by the endothelium.

Geographically, the North American and European markets are currently the major markets for endothelial dysfunction products due to their high R&D involvement, advanced medical facilities, and wide awareness of cardiovascular diseases and other related diseases. Lack of government intervention and funding for R&D affects growth and income shares in emerging and developing countries. With the substantial increase in cardiovascular and diabetes cases in Asia Pacific and Middle East countries in the coming years, the demand for the endothelial dysfunction market in these regions is likely to grow over the next seven years.

The Global Info Research report includes an overview of the development of the Endothelial Dysfunction industry chain, the market status of Hospital (Western Medicine Treatment, Chinese Medicine Treatment), Clinic (Western Medicine Treatment, Chinese Medicine Treatment), and key enterprises in developed and developing market, and
