According to our (Global Info Research) latest study, the global Endothermic Mat market size was valued at USD 87 million in 2022 and is forecast to a readjusted size of USD 124.5 million by 2029 with a CAGR of 5.2% during review period.

An endothermic mat is a heat-absorbing wrap system that releases chemically-bound water to cool its outer surfaces when exposed to fire. It can provide fire resistance for structural steel components, critical electrical components, and wall opening membranes. It is easy to install, thin, flexible, and can fit complex shapes. It has low organic content, low smoke generation, and limited flame propagation. It can be used in new or retrofit applications that require full envelope protection. It is made of high-temperature inorganic fibers that have low bio-persistence⁴.

The Global Info Research report includes an overview of the development of the Endothermic Mat industry chain, the market status of Petrochemical (Organic Fiber, Inorganic Fiber), Electric Power (Organic Fiber, Inorganic Fiber), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Endothermic Mat.
