## Abstracts

The global Endothermic Mat market size is expected to reach \$ 124.5 million by 2029, rising at a market growth of 5.2% CAGR during the forecast period (2023-2029).

An endothermic mat is a heat-absorbing wrap system that releases chemically-bound water to cool its outer surfaces when exposed to fire. It can provide fire resistance for structural steel components, critical electrical components, and wall opening membranes. It is easy to install, thin, flexible, and can fit complex shapes. It has low organic content, low smoke generation, and limited flame propagation. It can be used in new or retrofit applications that require full envelope protection. It is made of high-temperature inorganic fibers that have low bio-persistence<sup>4</sup>.

This report studies the global Endothermic Mat production, demand, key manufacturers, and key regions.
