An Endotoxin Detection & Removal System refers to a specialized system or setup that is designed to detect and remove endotoxins from various sources. This system incorporates a combination of equipment, techniques, and processes to effectively detect and eliminate endotoxins. The detection component of the system typically involves the use of specific assays or tests, such as the Limulus Amebocyte Lysate (LAL) test. These tests are designed to detect the presence of endotoxins in samples, such as water, pharmaceuticals, medical devices, or food products. The system may include automated instruments or manual procedures for sample preparation, testing, and result interpretation. An Endotoxin Detection & Removal System is commonly used in industries such as pharmaceutical manufacturing, healthcare, and food processing.
