The global Endotoxin Detection & Removal Services market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Endotoxin Detection & Removal Services refer to the specialized services that are designed to detect and eliminate endotoxins from various sources. Endotoxins are toxic components that are released from the cell walls of certain bacteria, such as Gram-negative bacteria. These endotoxins can be harmful to humans and animals, causing various health issues and complications. The services involve the use of advanced techniques and equipment to detect the presence of endotoxins in samples, such as water, pharmaceuticals, medical devices, and food products. Various methods, such as Limulus Amebocyte Lysate (LAL) test, are utilized for endotoxin detection. Endotoxin removal techniques may include filtration, chemical treatment, and heat treatment, depending on the nature of the sample and the level of endotoxin contamination. These services are crucial in industries such as pharmaceutical manufacturing, healthcare, and food processing, where the presence of endotoxins must be minimized to ensure product safety and quality.
