According to our (Global Info Research) latest study, the global End-Of-Line Packaging market size was valued at US\$ 849 million in 2025 and is forecast to a readjusted size of US\$ 1121 million by 2032 with a CAGR of 3.9% during review period.

End-of-line packaging refers to the final packaging stage before a product leaves the factory, after completing the preceding processes such as production, filling, and labeling. Automated equipment handles processes like boxing, sealing, palletizing, wrapping, labeling, inspection, and unitized logistics. It solves the problems of low efficiency, high labor costs, high error rates, inconsistent packaging, significant logistics losses, and difficulty in meeting the demands of large-scale production inherent in traditional manual packaging. This enables companies to achieve a highly efficient, standardized, traceable, and low-cost outbound packaging process. The product has an average price of approximately US\$280,000, with global sales of approximately 2,946 sets.
