Abstracts

In its basic form, “energy as a service” is the idea that an outside service company guarantees a building’s future energy costs. If the building uses more energy than predicted, the service company is responsible for the difference. But if the building uses less energy than contracted, the service company profits. From the building owner’s perspective, it’s a way to manage overhead electricity costs that fluctuate by time-of-day rates and demand peaks, and fossil fuel costs that fluctuate throughout the year. For the service company, it is a way to be creative in energy supply and management, and an incentive for efficiency improvement.
