## Abstracts

According to our (Global Info Research) latest study, the global Energy Based Device in Hyperhidros market size was valued at USD 70 million in 2023 and is forecast to a readjusted size of USD 108.8 million by 2030 with a CAGR of 6.5% during review period.

This report studies the energy based device in hyperhidrosis market. Hyperhidrosis is a condition characterized by abnormally increased sweating, in excess of that required for regulation of body temperature. Although primarily a physical burden, hyperhidrosis can deteriorate quality of life from a psychological, emotional, and social perspective. It has been called by some 'the silent handicap'. Hyperhidrosis can either be generalized, or localized to specific parts of the body. Hands, feet, armpits, groin, and the facial area are among the most active regions of perspiration due to the high number of sweat glands in these areas. When excessive sweating is localized (e.g. palms, soles, face, underarms, scalp) it is referred to as primary hyperhidrosis or focal hyperhidrosis. Excessive sweating involving the whole body is termed generalized hyperhidrosis or secondary hyperhidrosis. It is usually the result of some other, underlying condition.
