Energy Management Controller refers to intelligent control devices used to monitor, manage, and optimize energy generation, distribution, storage, and consumption processes. These controllers integrate communication modules, control algorithms, data acquisition functions, and energy management software to improve energy efficiency and system reliability. They are widely used in smart grids, industrial energy systems, renewable energy facilities, commercial buildings, and energy storage systems. The product scope includes industrial energy controllers, building energy management controllers, and renewable energy management units, excluding basic electrical control components without energy optimization functions.

The industry chain of Energy Management Controller includes upstream electronic components, midstream controller manufacturing, and downstream energy management applications. Upstream suppliers provide microcontrollers, power components, sensors, communication modules, circuit boards, and embedded software

components. Midstream manufacturers conduct hardware design, software development, system integration, testing, and customized solution production. Downstream applications include power companies, industrial enterprises, commercial buildings, renewable energy operators, and energy storage providers requiring intelligent energy management solutions.
