## Abstracts

Energy security is one of the most important and widely used terminologies used these days especially in the developed and the developing nations. We can define energy security as the ability of the nation or a country to secure the power plants and energy resources from physical attacks and cyber intrusions for uninterrupted and sustained supply of energy, to the country and its people. Securing the energy and power resources has become very important and most of the countries are taking firm measures to protect their power plants and energy resources. This need for securing the power plants has increased because of the growing terror and criminal attacks and growing sophisticated cyber attacks on the power plants and energy resources. These power plants play an important role in any of the countries development and are considered to be the backbone of the nation and any attack on these power plants can paralyze the countries development.

## SCOPE OF THE REPORT:

This report studies the Energy Security market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Energy Security market by product type and applications/end industries.

Along with these outside attacks, there are always threats of insider attacks and lack of a comprehensive solution for securing the power plants. Many countries have made strict regulations and compliances for energy security. There are international bodies for regulating and standardizing the compliances as well. These issues of increased attacks, strict government regulations and government rules have given rise to the overall energy security market. There are companies which provide sophisticated physical security solutions which includes unmanned aerial vehicles and highly

sophisticated intrusion detection and prevention system. Many companies also provide network security and cyber security solutions for preventing the complicated cyber attacks, thus securing the overall power plants from these attacks and keep the operations uninterrupted.

The global Energy Security market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of 11.3% between 2017 and 2023.
