## Abstracts

According to our (Global Info Research) latest study, the global Energy Site Selection Tools Software market size was valued at US\$ 368 million in 2025 and is forecast to a readjusted size of US\$ 510 million by 2032 with a CAGR of 4.3% during review period.

Energy site selection tools identify, evaluate, and screen potential locations for energy-related capital projects. These software products help companies plan a wide range of projects, including renewable energy assets, such as solar, wind, and battery storage, electric vehicle charging infrastructure, nuclear facilities, conventional power generation, and grid-related assets. Many platforms also support data centers and other large-load developments, which face similar siting, grid, and permitting constraints. Energy site selection tools provide purpose-built geospatial mapping and geographic information system (GIS) analysis for early-stage energy project site identification and due diligence. These capabilities enable teams to identify target regions, locate points of interconnection, assess land characteristics and resource potential, analyze environmental and permitting constraints, and review parcel and landowner data through desktop analysis.
