Abstracts

The global Enfortumab Vedotin?ejfv market size is expected to reach \$ 5424 million by 2032, rising at a market growth of 13.5% CAGR during the forecast period (2026-2032).

Vandetanib is an oral small molecule tyrosine kinase inhibitor primarily used for the treatment of medullary thyroid cancer (MTC). It works by inhibiting multiple tyrosine kinases associated with cancer cell growth and metastasis, such as epidermal growth factor receptor (EGFR), vascular endothelial growth factor receptor (VEGFR), and the RET proto-oncogene, thereby suppressing tumor growth and angiogenesis, leading to an anti-tumor effect. Vandetanib can be used alone or in combination with other therapeutic regimens and has shown significant efficacy in the treatment of advanced or metastatic MTC. This drug is typically used in cancer patients whose disease cannot be controlled by conventional therapies and has been approved for clinical use in certain countries and regions. In 2025, global Vandetanib production reached approximately 450,000 bottles.

Vandetanib (Vandetanib) is a tyrosine kinase inhibitor primarily used to treat medullary thyroid cancer (MTC). With the growing global demand for cancer treatments, particularly in the field of advanced and metastatic cancer treatment, the market prospects for Vandetanib remain promising. In recent years, the diagnostic rate of medullary thyroid cancer has increased, and the limitations of traditional treatments in controlling advanced MTC have led to the gradual emergence of targeted drugs like Vandetanib as a new treatment option. The market demand for Vandetanib primarily comes from MTC patients, especially those for whom traditional therapies are ineffective or surgery cannot be used. Although the drug has been approved and entered markets in certain countries and regions, its high cost and market competition have limited its market penetration. With the rapid development of targeted therapies

and the emergence of new-generation cancer drugs, Vandetanib faces intense competition from other treatment options, such as immunotherapies and molecular targeted drugs.
