Engine compartment insulation pads are a type of material installed inside the engine compartment of a car. Their main function is to reduce the radiation and conduction of engine heat, as well as the transmission of engine noise. These insulation pads are usually made of high-temperature resistant materials and can effectively isolate and absorb the heat and noise generated by the engine. By reducing the increase in temperature inside the engine compartment, insulation pads can not only improve the air conditioning effect in the car, but also help to increase the efficiency and life of the engine.
