A cylinder head gasket is a part that seals the gap between the engine block and the cylinder head in an internal combustion engine. It prevents the leakage of coolant, oil, and combustion gases, and maintains the pressure and temperature of the engine. There are different types of cylinder head gaskets, such as multi-layer steel, solid copper, composite, and elastomeric. A cylinder head gasket can fail due to overheating, detonation, corrosion, or improper installation. A failed cylinder head gasket can cause

white or blue smoke from the exhaust, loss of power or performance, overheating or coolant loss, or oil contamination or loss. A cylinder head gasket is an important component of an engine that requires proper care and maintenance.
