Abstracts

According to our (Global Info Research) latest study, the global Engine Fuel Quality Sensor market size was valued at US$ 146 million in 2025 and is forecast to a readjusted size of US$ 242 million by 2032 with a CAGR of 7.3% during review period.

An Engine Fuel Quality Sensor is an electronic sensor used to monitor the physical and chemical properties of fuel in real time and provide this information to the Engine Control Unit (ECU). The ECU then adjusts fuel injection, ignition timing, air-fuel ratio, combustion strategy, and emissions control parameters to optimize engine performance, fuel efficiency, and emissions compliance.

Fuel quality sensors are increasingly important in modern engines because fuels may vary significantly in composition, ethanol content, density, contamination level, water content, and energy value.

In 2025, global Engine Fuel Quality Sensor ssales volume reached approximately 1.8 million units, with an average price of approximately US$ 80 per unit.
