Abstracts

According to our (Global Info Research) latest study, the global Engine Plastic Intake Manifold market size was valued at US\$ 1025 million in 2025 and is forecast to a readjusted size of US\$ 1082 million by 2032 with a CAGR of 0.6% during review period.

An engine plastic intake manifold is an injection-molded thermoplastic air-distribution assembly that routes air from the throttle/boost source to each cylinder. It may integrate swirl/tumble devices, EGR interface, fuel rail/injectors and sensors. Multi-piece shells joined by welding (e.g., vibration welding) are common to achieve complex runners, sealing and lightweight modular integration.

The upstream supply chain focuses on engineering plastic resin systems, glass fibers and additives, metal inserts/bushings, seals, and sensor interface components; the downstream market serves engine/hybrid powertrain manufacturers and Tier-1 suppliers of modular intake systems.

In 2025, global engine plastic intake manifold production reached approximately 57 million units, with an average global market price is between \$15 and \$20 per unit.
