A site dumper is a vehicle designed for carrying bulk material, often on building sites, mining operations, agricultural properties, and other industries. It typically consists of a large open skip mounted on wheels, with the ability to tilt the skip to unload its contents. Site dumpers are smaller and have a lower capacity, typically ranging from 1-10t. Site dumpers' compact size makes them more agile, better suited for navigating tight spaces and uneven terrain commonly found on construction sites. Site dumper can be divided into engine powered site dumper and electric powered site dumper.

This report focuses on engine powered site dumper market. Engine powered site dumpers are powered by engines to drive the site dumper, and can be controlled to tip over by hydraulic systems on site to achieve automatic unloading of goods. This type of vehicle has the characteristics of strong carrying capacity, high unloading efficiency, and easy operation, and is suitable for transporting various bulk materials. Engine powered site dumpers are widely used in construction sites. Site dumpers are of great significance to improving construction efficiency and ensuring construction progress with their high efficiency, flexibility and strong adaptability.
