The global Engine Rotating Bracket market size is expected to reach \$ 3399 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

In 2025, global engine rotating bracket production reached approximately 8,720,000 units. An engine rotating stand is a specialized device designed to securely hold and support an engine while allowing it to rotate at specific angles or directions. It is commonly used during engine assembly, maintenance, testing, and commissioning, enhancing operational flexibility, safety, and efficiency. The rotating stand features a stable structure with adjustable locking and rotation mechanisms, making it suitable for the maintenance and assembly of engines in automotive, marine, aerospace, and industrial power applications.

Engine rotating brackets are key structural components widely used in automobiles, construction machinery, generator sets and other fields. They mainly perform critical functions such as supporting and damping the engine, adjusting rotational angles, and enabling installation and positioning. With the steady growth in global production and sales of complete vehicles and engineering equipment, as well as continuous demand for maintenance and replacement of aging equipment, the overall market demand of the industry maintains a sound growth momentum. The global supply landscape features coexistence of domestic and foreign manufacturers. Relying on a complete industrial chain of stamping, casting and mechanical processing, domestic manufacturers boast advantages in large-scale production, cost performance and customized rapid delivery, continuously increasing their share in supporting and export markets. Foreign manufacturers focus on high-end precision adaptation, emphasizing product durability and dimensional accuracy. Currently, the industry is evolving toward lightweight design, high strength, long service life and integrated structure. Meanwhile, the upgrading of

intelligent automated manufacturing and accelerated import substitution, together with expanding application scenarios in new energy hybrid vehicles and special engineering machinery, further drive the sustained and healthy development of the engine rotating bracket industry.
