Engineering cement composite material is a new type of building material composed of cement matrix and other materials (such as fiber material, granular material, etc.), which has high strength, durability and crack resistance, and is widely used in construction projects. Engineering cement composite materials are usually made by mixing cement, fiber materials and granular materials in a certain proportion, and are made through multiple processes such as adding water, mixing, vibrating, and molding. Fibrous materials can increase the toughness and tensile strength of the material, and granular materials can increase the compactness and durability of the material.
