## Abstracts

The global Engineering Document Management Software market size is expected to reach \$ 559 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Engineering document management software is a software tool used to organize, store, track and share documents and information related to engineering projects. These software are usually widely used in construction, engineering, manufacturing and other industries to manage large amounts of design documents, construction drawings, specifications, contract documents and other project documents.

Engineering document management software is rapidly evolving towards digitalization, standardization, and collaboration, and is widely used in engineering design, construction, manufacturing, and operation and maintenance. It aims to improve the efficiency of document creation, version control, approval, release, and cross-team sharing and collaboration. Market drivers include centralized management of BIM/digital twin and CAD/modeling files, traceability and compliance of engineering changes, and deep integration with project management, collaboration platforms, ERP/PLM, and other systems. Trends focus on the flexibility and intelligent metadata management of cloud or hybrid deployments, automated change and version control, access control and auditing, and efficient storage and retrieval capabilities for large files. Meanwhile, data security, intellectual property protection, and industry standardization (such as ISO, IEC, and industry association standards) have become key considerations for enterprises when selecting software.
