Abstracts

According to our (Global Info Research) latest study, the global Enhanced Oil Recovery market size was valued at USD 3876.1 million in 2023 and is forecast to a readjusted size of USD 5173.4 million by 2030 with a CAGR of 4.2% during review period.

Enhanced oil recovery (abbreviated EOR), also called tertiary recovery, is the extraction of crude oil from an oil field that cannot be extracted otherwise.

EOR production is considered as a project in itself and requires a large number of equipment and packages. Studies, pilot projects, engineering design, equipment procurement, feedstock planning, drilling and other materials, play important role in EOR projects. Upfront capital costs in EOR projects are significant. Each link is very complicated, so it is difficult to calculate all the income generated by the EOR project. In addition, because some expenditures come from the oilfield developers themselves, this part of revenue is considered as the operating costs of the oilfield developers themselves. It is therefore necessary to explain the scope of the data reported.

The industry's leading producers are Linde Group, Air Liquid and PetroChina Daqing, with revenues of 36.29%, 11.60% and 11.30% respectively in 2019.

The Global Info Research report includes an overview of the development of the Enhanced Oil Recovery industry chain, the market status of Onshore (CO₂ Enhanced Oil Recovery, Nitrogen Enhanced Oil Recovery), Offshore (CO₂ Enhanced Oil Recovery, Nitrogen Enhanced Oil Recovery), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Enhanced Oil Recovery.
