According to our (Global Info Research) latest study, the global Enlonstobart market size was valued at US\$ 29.33 million in 2025 and is forecast to a readjusted size of US\$ 66.91 million by 2032 with a CAGR of 6.2% during review period.

Enlonstobart is a fully human anti-PD?1 monoclonal antibody and belongs to the class of immune checkpoint inhibitor anti-tumor drugs. It specifically binds to the PD?1 receptor on the surface of human T cells, blocks its combination with ligands, relieves the tumor-mediated immune suppression, reactivates the body's endogenous anti-tumor immune response, and enhances the ability of immune cells to recognize and kill tumor tissues. With a definite anti-tumor mechanism and controllable safety profile, this drug is clinically mainly used for the treatment of various advanced solid tumors, providing a novel immunotherapy option for tumor patients. In 2025, global Enlonstobart production reached approximately 335,294 vials.

Enlonstobart, a fully human anti-PD?1 monoclonal antibody independently developed by CSPC Pharmaceutical Group, is an innovative drug in the field of domestic tumor immunotherapy. Relying on differentiated product characteristics and clear clinical positioning, it has gradually established unique competitive advantages in the PD?1 inhibitor market. Approved for the second-line treatment of recurrent or metastatic cervical cancer, this drug is recommended by authoritative clinical guidelines, filling the treatment gap for specific patient groups and meeting unmet clinical needs. Endowed with low immunogenicity derived from its fully human structure, optimized safety performance and independent intellectual property rights, Enlonstobart boasts sound market expansion potential. With the continuous advancement of medical insurance access and indication expansion, its market accessibility has been further improved. Amid intensified competition and severe homogenization in the domestic PD?1 track, it

has emerged as a high-potential domestic immunotherapy agent by virtue of precise indication layout and reliable clinical efficacy. In the future, it is expected to further strengthen its market influence and industrial position through exploration of combination therapy and overseas market expansion.
