## Abstracts

Enramycin premix is formulated with enramycin, rice bran oil and corn flour. This product is a gray or gray-brown powder with a special odor. It is fermented by actinomycetes and is an unsaturated fatty acid. Polypeptide antibiotics combined with more than a dozen amino acids. It has a strong inhibitory effect on Gram-positive bacteria, and it is not easy to develop drug resistance after long-term use. It can change the distribution of bacterial communities in the intestinal tract, is conducive to the digestion and absorption of feed nutrients, promotes animal growth and improves feed conversion rate, so it is recommended as a pharmaceutical feed additive by many countries in the world. Enramycin is not easily absorbed, so there are fewer drug residues in the body of livestock and poultry.
