According to our (Global Info Research) latest study, the global ENT CBCT market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

ENT CBCT is a three-dimensional imaging technology that uses a cone-shaped beam to scan a patient's ear, nose, and throat to produce high-quality three-dimensional images. The principle of ENT CBCT is to use the penetrability of X-rays to obtain information about the internal structure of the patient's ears, nose and throat.

The advantage of ENT CBCT technology is that it can provide high-quality three-dimensional images, which can show the internal structures of the patient's ENT, including bones, soft tissues, etc. Ear, nose and throat CBCT can also provide more accurate diagnosis and treatment plans, which can help doctors better develop more effective treatment plans based on the patient's condition.
