Abstracts

The global ENT CBCT market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The advantage of ENT CBCT technology is that it can provide high-quality three-dimensional images, which can show the internal structures of the patient's ENT, including bones, soft tissues, etc. Ear, nose and throat CBCT can also provide more accurate diagnosis and treatment plans, which can help doctors better develop more effective treatment plans based on the patient's condition. In the future, ENT CBCT has greater room for development.

ENT CBCT is a three-dimensional imaging technology that uses a cone-shaped beam to scan a patient's ear, nose, and throat to produce high-quality three-dimensional images.
