The global Enteral Nutrition and Parenteral Nutrition market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Increasing medical needs: As the global population ages and the incidence of chronic diseases increases, the number of patients requiring nutritional support continues to increase. Enteral and parenteral nutrition are important means of nutritional support, and their demand has also increased.

Technological progress: With the continuous advancement of medical technology, the formulas and delivery methods of enteral and parenteral nutrition have been optimized and improved, improving treatment effects and patient survival rates.

Clinical studies: A large number of clinical studies have provided more evidence and support for the application of enteral and parenteral nutrition. These studies not only confirm the effectiveness of enteral and parenteral nutrition in the treatment of various diseases, but also provide assurance for their safety.

Enteral nutrition: Enteral nutrition (EN) is a nutritional support method that provides nutrients needed for metabolism and various other nutrients through the gastrointestinal tract. It depends on the length of time, mental state and gastrointestinal function. There are two ways of enteral nutrition: oral and transcatheter input. Transcatheter input includes nasogastric tube, nasoduodenal tube, nasojejunal tube and gastrojejunostomy tube.

Parenteral nutrition: Parenteral nutrition (PN) is the supply of nutrients intravenously as

nutritional support before and after surgery and for critically ill patients. All nutrition supplied from the parenteral source is called total parenteral nutrition (TPN).

This report studies the global Enteral Nutrition and Parenteral Nutrition production, demand, key manufacturers, and key regions.
