The global Enteral Nutrition Pump market size is expected to reach \$ 656 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

An enteral nutrition pump is a medical device used to provide enteral nutrition support. It mainly delivers nutritional fluids (such as formula milk, drugs, etc.) to the patient's gastrointestinal tract through an infusion tube. It ensures that patients receive the required nutrition on demand by precisely controlling the flow rate and delivery volume. It is suitable for patients who cannot get enough nutrition through a normal diet. Enteral nutrition pumps are often used for critically ill patients, patients recovering from surgery, or patients who cannot eat for a long time to help maintain nutritional balance and promote recovery.

This report studies the global Enteral Nutrition Pump production, demand, key manufacturers, and key regions.
