Abstracts

An enteric softgel capsule is an oral drug delivery system encapsulated in a gelatin-based shell designed to release its contents in the small intestine rather than the stomach. The gelatin shell, which may include glycerin and plasticizers, is flexible and easy to swallow. This specific formulation prevents the premature release of the encapsulated substance, making it suitable for drugs or supplements sensitive to gastric acids. Enteric softgel capsules are commonly utilized in the pharmaceutical and nutraceutical industries, offering benefits such as enhanced drug absorption, reduced gastrointestinal side effects, and improved patient compliance, especially for individuals with specific health considerations.

According to our (Global Info Research) latest study, the global Enteric Coated Softgels For Consumer Health Supplements market size was valued at US\$ 1871 million in 2023 and is forecast to a readjusted size of USD 2462 million by 2030 with a CAGR of 3.9% during review period.

The enteric softgel capsules industry is experiencing growth propelled by technological advancements in manufacturing. Ongoing innovations enhance the efficiency and precision of softgel capsule production, contributing to improved quality and cost-effectiveness. Key industry players are actively focusing on developing advanced manufacturing methodologies, emphasizing automation and novel techniques. For instance, Catalent, Inc, offers OptiGel DR Softgel Technology, that has the capability to deliver an enteric release profile in a single-step manufacturing process without the need for coating. This commitment to technological progress not only boosts production capabilities but also ensures a competitive edge in the market. The growing synergy between technological advancements and the strategic initiatives of key players

underscores a positive trajectory for the enteric softgel capsule market, fostering increased reliability and innovation in the manufacturing process. In addition, the enteric softgel capsules industry is experiencing additional growth due to the increasing focus on clinical trials for new technologies and formulations. For instance, in October 2023, Evonik, a specialty chemicals leader, introduced EUDRACAP, a preclinical functional oral capsule. This enteric-coated capsule offers pharmaceutical companies a valuable tool in optimizing drug development during preclinical trials. By reducing costs, time, and variables, EUDRACAP enhances the efficiency of drug development processes. This innovative approach aligns with the industry's commitment to advancing methodologies, fostering a climate of continuous improvement and driving the market's growth through enhanced capabilities in clinical research and development.
