## Abstracts

According to our (Global Info Research) latest study, the global Enterprise Asset Management (EAM) Space market size was valued at USD 4855.9 million in 2023 and is forecast to a readjusted size of USD 9157.6 million by 2030 with a CAGR of 9.5% during review period.

Public transport is a shared passenger-transport service which is available for use by the general public, as distinct from modes such as taxicab, carpooling, or hired buses, which are not shared by strangers without private arrangement.

Public transport modes include city buses, trolleybuses, trams (or light rail) and passenger trains, rapid transit (metro/subways/undergrounds etc.). Public transport between cities is dominated by airlines, coaches, and intercity rail. High-speed rail networks are being developed in many parts of the world. Most public transport runs to a scheduled timetable with the most frequent services running to headway.

There are distinct differences in urban public transit between Asia, North America, and Europe. In Asia, mass transit operations are predominantly run by profit-driven privately owned and publicly traded mass transit and real estate conglomerates. In North America, mass transit operations are predominantly run by municipal transit authorities. In Europe, mass transit operations are predominantly run by both state-owned and private companies. Public transport services can be profit-driven by use of pay-by-the-distance fares or funded by government subsidies in which flat rate fares are charged to each passenger. Services can be fully profitable through high ridership numbers and high fare box recovery ratios, or can be regulated and possibly subsidized from local or national tax revenue. Fully subsidized, zero-fare (free) services operate in some towns

and cities.

Global Enterprise Asset Management (EAM) Space key players include Roads and Transport Authority (RTA), Bahrain Public Transport Company (BPTC), Saudi Railway Company (SAR), Oman National Transport Company, etc.
