An enterprise carbon asset management platform is a comprehensive management system built upon digital technologies—such as big data, cloud computing, and the Internet of Things (IoT)—designed to facilitate the intelligent, lifecycle-wide management of an enterprise's carbon emissions data, reduction projects, carbon allowances, and carbon credit assets. By integrating functions such as carbon emissions monitoring, carbon footprint accounting, allowance compliance management, carbon trading decision support, and carbon asset valuation, the platform empowers enterprises to accurately assess their carbon emissions status, optimize reduction strategies, and minimize compliance costs. Furthermore, by enabling participation in carbon market trading, it facilitates the preservation and appreciation of carbon asset value, thereby enhancing the enterprise's green competitiveness and sustainable development capabilities under the dual impetus of climate change policies and market mechanisms.
