Abstracts

The global Enterprise CI/CD Software market size is expected to reach \$ 26428 million by 2032, rising at a market growth of 13.8% CAGR during the forecast period (2026-2032).

Enterprise CI/CD (Continuous Integration/Continuous Delivery) Software is an integrated set of development operation (DevOps) tooling designed for enterprise software R&D teams, which automates the full delivery pipeline of code submission, compilation, unit testing, static security scanning, artifact packaging, environment deployment, automated testing and release rollback.

It implements Continuous Integration (automatically merging developer code into a shared repository, building and verifying quality in real time) and Continuous Delivery/Deployment (automatically pushing qualified builds to testing, pre-production and production environments on demand or automatically). It unifies fragmented manual release workflows, reduces human error, shortens software iteration cycles, standardizes release governance and supports multi-environment, multi-branch, multi-team collaborative delivery for web services, mobile apps, embedded programs and cloud-native applications.
