Abstracts

According to our (Global Info Research) latest study, the global Enterprise Cloud Access Security Broker (CASB) market size was valued at US\$ 9845 million in 2025 and is forecast to a readjusted size of US\$ 16821 million by 2032 with a CAGR of 7.6% during review period.

A Cloud Access Security Broker (CASB) is a security policy enforcement point placed between cloud service users and cloud applications. It acts as a digital gatekeeper, providing critical visibility, compliance monitoring, data protection (DLP), and threat defense for enterprise SaaS, PaaS, and IaaS environments.

The growth of Enterprise Cloud Access Security Broker (CASB) is primarily driven by the enterprise shift to the cloud, the widespread adoption of SaaS applications, the normalization of remote work, and mounting pressure regarding data compliance. As enterprises continue to migrate their office collaboration, customer management, R&D management, file sharing, and business systems to the cloud, traditional perimeter-based security struggles to cover employee access behaviors across multiple devices, locations, and cloud applications; consequently, risks such as 'Shadow IT,' account misuse, sensitive data exfiltration, accidental cloud file sharing, and cloud application misconfigurations are on the rise. By acting as an intermediary between users and cloud services, CASB provides capabilities for cloud application visibility, access control, data loss prevention, threat protection, and compliance auditing, thereby helping enterprises centrally manage the security risks associated with the use of SaaS, IaaS, PaaS, and select generative AI tools. Against the backdrop of the accelerating convergence of Zero Trust, SASE/SSE, data security governance, and AI usage governance, CASB is evolving from a standalone cloud access control tool into a

foundational control layer within the broader enterprise cloud and data security ecosystem.
