According to our (Global Info Research) latest study, the global Enterprise Cloud AIOps Platform market size was valued at US\$ 2213 million in 2025 and is forecast to a readjusted size of US\$ 5122 million by 2032 with a CAGR of 12.7% during review period.

An enterprise cloud AIOps (Artificial Intelligence for IT Operations) platform is a new-generation intelligent operations system that integrates big data, machine learning, and automation technologies, designed to enhance the observability, fault prediction capabilities, and response efficiency of enterprise IT infrastructure and applications.

The development of enterprise cloud AIOps platforms is mainly driven by the increasing complexity of IT system architecture, the widespread application of cloud-native and microservices, the explosive growth of operation and maintenance data, and the ever-increasing demands of enterprises for business continuity and fault response efficiency. Traditional manual operation and maintenance is difficult to cope with the massive alarms and rapid location needs in multi-cloud and hybrid environments. However, the maturity of artificial intelligence and big data technologies has made automated anomaly detection, root cause analysis, and intelligent self-healing possible. At the same time, the accelerated digital transformation has prompted enterprises to reduce operation and maintenance costs, improve resource utilization, and support agile delivery through intelligent means, thereby driving the accelerated implementation of AIOps platforms in industries such as finance, telecommunications, internet, and large-scale manufacturing.
