The global Enterprise Data Center Cooling Valves market size is expected to reach \$ 244 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Enterprise data center cooling valves are fluid control devices deployed in the cooling systems of enterprise self-built or hosted data centers. They are mainly used to regulate, cut off, or distribute the flow and pressure of chilled water, cooling water, or liquid cooling media to ensure that servers, storage, and network equipment operate stably within a safe temperature range. In 2025, global Enterprise Data Center Cooling Valves production reached approximately 785 k units, with an average global market price of around 209 US\$/Unit. The production capacity of Enterprise Data Center Cooling Valves reaches 980 k units, and the industry's gross profit margin is approximately between 20% and 40%.

The upstream of the enterprise data center cooling valve industry chain includes suppliers of special metal materials (such as stainless steel and copper alloys), precision casting and sealing components; the midstream covers valve design, manufacturing, testing and intelligent integration; and the downstream targets data center builders, electromechanical general contractors and cooling system integrators.
