Abstracts

Data loss prevention (DLP) is a security strategy that ensures sensitive or confidential information doesn't leak outside of the corporate network in a way that is unsafe or non-compliant.

Data loss prevention (DLP) software, also known as data leak prevention software, is used to secure control and ensure compliance of sensitive business information. A key component of DLP solutions is distribution control, which ensures users do not send private information outside of corporate business networks. Security staff and network administrators set business rules that determine who can view, change, and share confidential data. DLP tools often control data on both the network and endpoint level to ensure policies remain consistent across the company. These tools are used to ensure the protection of data and prevent leaks by internal sources.
