According to our (Global Info Research) latest study, the global Enterprise Digital Brain market size was valued at US\$ 1194 million in 2025 and is forecast to a readjusted size of US\$ 2932 million by 2032 with a CAGR of 12.2% during review period.

An enterprise digital brain is an intelligent decision-making and operations management platform integrating big data, artificial intelligence, cloud computing, and digital twin technologies. It unifies and integrates various types of data within an enterprise to achieve intelligent analysis and automated decision-making. This system is similar to the enterprise's 'central nervous system,' connecting multiple business systems such as production, supply chain, finance, customer management, and logistics. Through real-time data acquisition, predictive analysis, and automated decision-making, the enterprise digital brain helps enterprises optimize operational processes, improve efficiency, and enhance strategic decision-making capabilities. This technology is widely used in manufacturing, energy, finance, retail, logistics, and smart cities. The upstream of the enterprise digital brain industry chain includes cloud infrastructure providers, data storage technology vendors, artificial intelligence algorithm developers, IoT sensor companies, and data integration tool providers; the midstream consists of enterprise digital brain platform developers and solution providers, responsible for integrating data management systems, AI analysis engines, visualization systems, and decision support tools; downstream users mainly include large enterprises, industrial manufacturing companies, logistics companies, financial institutions, and government agencies requiring centralized digital management and intelligent decision-making systems. Solution providers typically have gross profit margins between 40% and 58%.
