According to our (Global Info Research) latest study, the global Enterprise-Grade AI Agent market size was valued at US\$ 6503 million in 2025 and is forecast to a readjusted size of US\$ 104120 million by 2032 with a CAGR of 43.9% during review period.

An Enterprise AI Agent is an autonomous or semi-autonomous software entity endowed with capabilities for perception, reasoning, decision-making, and execution, specifically designed to accomplish specific business tasks within complex organizational environments. Centered around Large Language Models (LLMs) or specialized AI models, and integrating long-term and short-term memory mechanisms, tool-calling capabilities, business rule engines, and security governance policies, it is capable of interpreting natural language instructions, decomposing multi-step tasks, coordinating resources across systems, and continuously optimizing its course of action?whether under human supervision or in a fully autonomous mode.

Enterprise-grade AI agents are currently evolving from their early forms?such as Q&A bots, knowledge base assistants, and office support tools?into intelligent automation platforms capable of understanding business objectives, integrating with enterprise systems, invoking tools, and executing multi-step tasks. Their applications are expanding beyond isolated scenarios?such as customer service, sales, IT support, HR, finance, procurement, legal affairs, and data analytics?to encompass cross-system and cross-departmental business process orchestration. Market growth is primarily driven by a confluence of factors: enterprises' pursuit of cost reduction and efficiency gains, the automation of knowledge work, the enhancement of customer service experiences, the digital transformation of business processes, and the maturing capabilities of generative

AI. As internal enterprise applications and data become increasingly fragmented?rendering traditional manual operations and rule-based automation inadequate for efficiently handling complex tasks?enterprise AI agents have emerged as critical tools for boosting operational efficiency. By leveraging natural language interactions, these agents can seamlessly execute information retrieval, task decomposition, process execution, result reporting, and human-AI collaboration. Moving forward, these products will continue to evolve toward low-code development, multi-agent collaboration, industry-specific specialization, access governance, security auditing, and operational monitoring; they are poised to gradually become a core component within the broader ecosystem of enterprise application software and process automation frameworks.
