Storage class memory (SCM) is a type of physical computer memory that combines the power of dynamic random access memory (DRAM), NAND flash memory, and data persistence. It will not replace SSD deployments, but will serve as secondary storage that can be used in primary storage. Acts as a secondary write target when the storage drive reaches maximum capacity to improve performance for latency-sensitive applications.

Intel and Samsung are the only two vendors selling SCM drives, which are designed with their respective proprietary memory technologies, with Intel offering its Opta product line and Samsung's Z-NAND.
