Enterprise Mobility Management Software (EMM) is a software solution that helps organizations to secure and manage the use of mobile devices, such as smartphones and tablets, by their employees. EMM software aims to prevent unauthorized access to enterprise applications and corporate data on mobile devices, as well as to integrate mobile applications with work processes, policies, and objectives. EMM software typically includes a combination of Mobile Device Management (MDM), Mobile Application Management (MAM), and identity management tools.

The industry trend of EMM software is expected to be positive and growing in the coming years, as more organizations adopt flexible policies that allow employees to use their own or chosen devices for work purposes. Some of the factors driving the demand for EMM software are the increasing adoption of cloud-based services, the rising need for data security and compliance, the growing application of ERP and CRM systems, and the emergence of new technologies such as 5G, workplace analytics, and virtual and mixed reality.
