Abstracts

The enterprise network firewall market is still composed primarily of purpose-built appliances for securing enterprise corporate networks, although virtual appliances across public and private cloud and heavily virtualized data centers are becoming more important. Products in this market must be able to support single-enterprise firewall deployments and large and/or complex deployments. These include traditional ?big firewall? data center placements, branch offices, multitiered demilitarized zones, and, increasingly, virtual versions for the data center and various cloud environments. Customers should have the option to deploy versions within Amazon Web Services, Microsoft Azure and Google Cloud public cloud environments.
