According to our (Global Info Research) latest study, the global Enterprise Payment Software market size was valued at USD 882.8 million in 2023 and is forecast to a readjusted size of USD 1662.7 million by 2030 with a CAGR of 9.5% during review period.

Enterprise payment software is a type of software that helps large and multinational companies streamline and optimize payments processing. Through the use of this software, companies can increase the efficiency of their payment activities by reducing errors, preventing fraud, automating the processing of large numbers of transactions, and transferring funds from customers to suppliers in multiple currencies. This software can also assist in processing payments from different sales mediums, such as retail, e-commerce, and on the go. Enterprise payment software is used by accounting departments to match invoices with payments for bank reconciliation and payment tracking. Accountants also use this type of software to consolidate payment information from multiple sources and analyze payment performance at the enterprise level. The software can also be used by managers from departments such as procurement and sales to track which customers paid invoices and which suppliers were paid by the company. This type of software should integrate with any other products that are used for financial purposes, such as ERP systems and accounting software.

The industry trend of enterprise payment software is driven by several factors, such as:

The increasing demand for digital payments from consumers and businesses, especially in the wake of the COVID-19 pandemic, which has accelerated the shift away from cash and towards online and mobile channels.

The emergence of new technologies and innovations that enable faster, cheaper, more secure, and more convenient payments, such as real-time payments, blockchain, digital currencies, biometrics, 5G networks, Internet of Things (IoT), artificial intelligence (AI), and cloud computing.

The evolving regulatory landscape that poses both challenges and opportunities for payments providers, such as data privacy and cybersecurity regulations, anti-money laundering (AML) and know your customer (KYC) requirements, open banking initiatives, central bank digital currencies (CBDCs), e-money/cryptocurrency regulations, environmental and social governance (ESG) standards, and local regulatory pressures in different regions.

The increasing competition and collaboration among different players in the payments ecosystem, such as traditional banks, fintechs, tech giants, merchants, platforms, networks, schemes, processors, aggregators, regulators, governments, and customers.
