Abstracts

The global Enterprise Performance Management (EPM) Consulting Service market size is expected to reach \$ 9301 million by 2032, rising at a market growth of 7.3% CAGR during the forecast period (2026-2032).

Enterprise performance management (EPM) consultants support and advise companies through their corporate planning, analytics, and reporting activities. These providers offer project-based or long-term support around a company's performance initiatives. They may also support businesses with the implementation, adoption, and usage of EPM or corporate performance management (CPM) software.

The future market trends of this product are influenced by several factors, such as the increasing need for real-time monitoring and analysis of business performance, the growing demand for cloud-based EPM solutions, the rise of big data analytics, and the integration of advanced technologies such as artificial intelligence (AI), machine learning (ML), robotic process automation (RPA), and internet of things (IoT). Some of the possible market trends are: Shift to cloud-based and hybrid EPM solutions: Cloud-based and hybrid EPM solutions are expected to gain more popularity among companies due to their benefits such as lower cost, faster deployment, easier scalability, greater flexibility, and improved security. Cloud-based and hybrid EPM solutions also enable companies to access data from multiple sources and platforms, collaborate with stakeholders across locations and devices, and leverage cloud-native capabilities such as AI and ML. Adoption of AI-powered predictive analytics: AI-powered predictive analytics are expected to enhance the capabilities of EPM solutions by providing more accurate, timely, and actionable insights for decision-making. AI-powered predictive analytics can help companies to forecast future scenarios based on historical data patterns, identify risks and opportunities based on internal and external factors, optimize resource allocation based on demand and supply fluctuations, and

automate repetitive tasks based on predefined rules. Expansion of EPM scope to cover new business domains: EPM scope is expected to expand beyond the traditional finance function to cover new business domains such as sales, marketing, human resources (HR), customer service, operations, supply chain management (SCM), etc. This expansion will enable companies to align their performance management across the entire organization based on a common strategy framework. It will also enable companies to gain a holistic view of their business performance from different perspectives and dimensions.
