Enterprise Permitting and Licensing Software is the tool for receiving applications, taking payments, issuing permits, resulting inspections and generating reports. Enterprise Permitting and Licensing Software is used to track the workflows involved with individual and business applications for permits (such as building permits), and governments tracking the adherence to various laws and regulations by organizations operating in their jurisdictions.

Enterprise Permitting & Business Licensing Software - Municipal software that manages permit requests, approvals, and denials for a variety of regulated activities. The software assists with calculating and collecting permit fees and generating reports. Permits include building permits, land use permits, peddler permits, activity permits, and more. The system also helps assign and schedule inspections for permit requests. Municipalities spend money on these types of systems because they are revenue generators and vendors often sell the software under the “Community Development” heading. While a few vendors offer systems that only do permitting, most vendor software also supports business licenses as well.
